handmarc

Providing expertise to organizations facing vendor management challenges.

Responding to Software License Compliance Audits
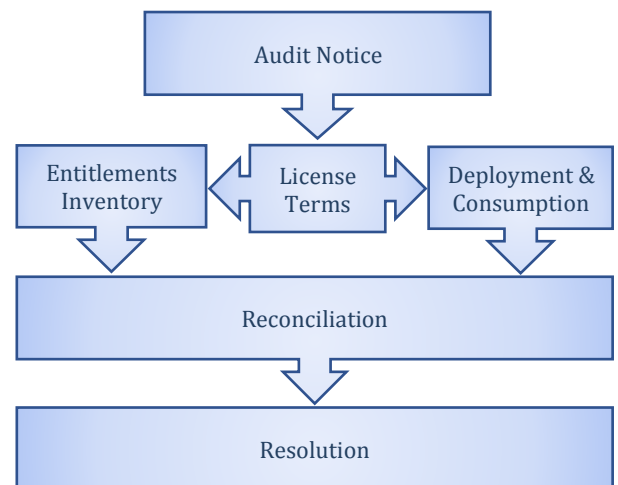

"Software Review," "License Compliance Assessment," "Asset Management Project" – whatever it's called, one of the more disruptive events in IT operations is a demand for a compliance audit. Few companies have resources ready and waiting to act – instead, teams must absorb the additional demands into their everyday work.

Handmarc stands ready to minimize the disruption of an audit request by orchestrating your response. We can help you organize the compilation of a complete inventory of license entitlements and develop a census of deployed software assets. We will coordinate the many stakeholders involved in responding to the audit, manage communications with the auditing parties, and leave you with a roadmap for handling future audits.

Managing audit responses is just one of a range of services Handmarc offers.

We can help with:

- Negotiating Enterprise software agreements
- Structuring IT Managed Services agreements (ITSM)
- Overseeing the RFP/RFI/RFQ process
- Defining a Vendor Management strategy
- Software Licensing and Compliance
- Saas and Cloud Service Contracts
- Assessing Supplier Risk

If you need assistance in handling your vendor management challenges call us today.
